myExperiment makes it really easy for the next generation of scientists to contribute to a pool of scientific workflows, build communities and form relationships. It enables scientists to share, reuse and repurpose workflows, reduce time-to-experiment, share expertise and avoid reinvention.

myExperiment is a collaborative environment where you can safely publish your workflows, share them with friends and groups, and discover the workflows of others. Workflows and packs of digital resources can now be swapped, sorted and searched like photos and videos on the Web.

Unlike Facebook or MySpace, myExperiment really understands researchers’ needs, like full control over sharing, licensing and attribution. iGoogle and Facebook interfaces are provided in addition to the Website, and Web developers can easily bring myExperiment services into any research environment.

Where experimental work flows
